Bangalore: QISoft chose Nagarro for a SAP NetWeaver product development project. Nagarro is a provider of outsourced software development services for highly complex markets across the world. Nagarro's SAP consulting expertise will help QISoft to gain critical market share among a large base of prospective customers running SAP as their primary Enterprise Resource Planning (ERP) system. Global Manufacturing Execution Systems (MES) vendor QISoft has successfully served manufacturing customers with its Windows-based product suite since 1986. The new line of QISoft SAP based products developed by Nagarro will allow QISoft to meet the needs of customers seeking extensive SAP integration for their MES software.

Kevin Luxton, President & CEO, QISoft says, "When we decided to move forward with building an SAP based solution, we sought out a partner with company, who shared our strategic vision, high technical standards and sense of urgency. Not only did we find all of those qualities in Nagarro, but it quickly became evident that Nagarro is an exceptionally trustworthy partner with our best interests in mind at all times." QISoft was impressed with Nagarro's strategic approach and focus on helping QISoft meet its core business objectives of getting new products to market quickly and with superior features and quality.

Nagarro's SAP Consulting practice has begun building a version of QISoft's well known MES product suite on the SAP NetWeaver platform. The new product line will be integrated using SAP Exchange Infrastructure tools, enabling it to become NetWeaver certified, to meet growing market demand.

Vikas Sehgal, President & CEO, Nagarro says, "Nagarro has a strong track record with both software companies and manufacturing customers, so building manufacturing software is a natural fit for us. Our SAP consulting expertise has allowed us to build a streamlined, powerful technical team that meets all QISoft's needs for this project."

With the addition of this new product offering, QISoft has uniquely positioned itself as being able to serve manufacturing customers with a combination of both Windows and SAP based products. This technology combination will allow QISoft to compete more effectively with MES vendors selling SAP based solutions, while giving prospective customers confidence in QISoft's ability to interface with SAP's ERP systems.
