

Fly into the future

Power your Airport's data and AI journey

We help airports become smart by harnessing the power of data and AI.

Our proven and ready solutions

Real-time operational insights

Utilizes data from multiple sources to provide 360° view of various operational aspects

Boosts efficiency and revenue through data-driven decisions

Real-time retailing insights

Offers airport operators a detailed understanding of retail performance

Optimizes revenue and enhances customer experience

Marketplace for airports

Future-ready e-commerce platform that delivers a superior customer experience

Drives ancillary revenue through a unified, omnichannel digital marketplace

Marketing 360

Hyper-intelligent co-pilot solution to help run end-to-end marketing operations

Simplifies all aspects of campaign management

Airside asset & Fleet management

Provides a centralized platform for motorized and non-motorized assets that enables airport to attain quick turnaround management

Enhances coordination for multiple stakeholders

Success stories

Hartsfield-Jackson Atlanta airport (ATL)

We have partnered with ATL to help transform their existing data lake to a modern data platform. One of the outcomes is an airport performance dashboard, delivering real-time insights into critical business pillars. This has helped stakeholders take informed and data-driven decisions, increasing operational efficiency across the airport processes, and offering comprehensive tracking and monitoring of all avenues.

Vienna International Airport (VIE)

After over 34 years, VIE wanted to modernize its Airport Operations Database (AODB) which has integration with over 30 airport systems. Nagarro played a crucial role in the testing of VIE's core systems with no impact on the day of operations. Our automation framework helped to reduce maintenance by up to 87% vs. traditional test automation and made test cycle execution 60% faster.

Dublin Airport Authority (daa)

Nagarro is developing a modern data platform that enables daa to generate multidimensional actionable insights across various airport processes. With this, stakeholders can take a decision in real time. The data platform will optimize several airport processes such as departures, gate management, passenger flows, and airside operations, including pavement and terminal management.

We measure our success by client satisfaction

Q: Solution matched the client's expectations?

A: **94%**
said yes!

Q: Aligned with client's corporate culture?

A: **98%**
said yes!

Q: Understood client's business needs

A: **95%**
said yes!
