

# Shape Your Digital Future with Enterprise Architecture Management

## Think big. Start smart. Go digital.

Customers' preferences are changing rapidly, forcing enterprises to rethink their engagement models and embrace digital innovation to connect with customers faster and more effectively. Organizations today face a range of challenges: undefined vision, the need for a cultural shift, disconnected people and processes, data silos, skill gaps and growing regulatory demands. Business and IT alignment is essential for transformation – but making IT a true differentiator for your business is what creates real value.

### Why EAM?

**At Nagarro, our Enterprise Architecture Management (EAM) services focus on enabling strategic control over complexity, transformation, and alignment.**

We help organizations establish a future-ready architecture function that aligns business goals with IT capabilities, supports informed decision-making, and ensures consistent governance across the enterprise. Our approach is based on established frameworks, field-tested methods, and a technology-agnostic mindset—be it SAP-centric, hybrid, or diverse landscapes. We don't just deliver solutions—we empower your organization to actively manage architecture as a strategic discipline and value driver.

We offer deep expertise in leveraging modern toolchains—including, but not limited to, SAP LeanIX, SAP Signavio, SAP Cloud ALM, and other leading architecture platforms. This flexibility ensures that you gain end-to-end transparency, strategic alignment and actionable insights across your business, application, and technology landscape. By connecting strategy, architecture, and process management, we empower your teams to make informed, data-driven decisions and achieve a single source of truth for all stakeholders.

From initial assessment and vision to architecture design, roadmap development, and implementation, our certified experts (TOGAF®, SAP, and more) guide you at every step—focusing on measurable value, sustainable transformation and operational excellence. Whether modernizing your IT, preparing for large-scale transformation, or driving digital innovation, we are your partner for future-ready enterprise architecture.

## Our Framework: SAP Enterprise Architecture Framework, TOGAF & more

Our consulting methodology is built on global standards such as the SAP Enterprise Architecture Framework (SAP EAF) and TOGAF®, that we always adapt to your organization's unique context and technology stack. We ensure a structured, transparent, and iterative architecture process—integrating business strategy, IT governance and process optimization, regardless of your preferred platforms.

With SAP EAF, TOGAF, and our hands-on project experience, we enable:

- **Integrated business and IT planning**
- **Standardized architecture modeling and documentation**
- **Sustainable governance and effective transformation management**
- **Measurable outcomes and continuous improvement**
