All beginnings and endings are ... easy!

Nagarro

Data Care

- SAP AddOn created in ABAP
- SAP look and feel in all apps ("single-system use")
- Fully integrated solution in SAP
- Central platform for your master data management
- Flexibility, speed and simplicity in the creation and customization of workflows

Data Workflow

- Central entry point for master data workflows
- Integrated into the SAP authorization concept
- Clear responsibilities per step

Data Toolbox

- Ready-made migration and maintenance programs for MDM
- Simple adjustment of data in MS Excel
- Secure mass maintenance in SAP

Data Hub

- Simple distribution of master data to other systems
- Clear monitoring through SAP technology
- Clear handling of the distribution

Data Quality

- Freely definable checks
- Automatic notifications
- Nagarro Data Quality Index (NDQI)

Data Status

- Check whether master data is used by business processes
- Testing at various levels - supplier, material, customer
- Automatic analyses & manual control by users

Data Protection

- Field values can be encrypted and written to the vault
- Customer fields can be overwritten or deleted
- Deletion and blocking indicators can be set

Data Masking

- Masking of business partners, conditions and employees
- Masking of material valuation prices
- No customizing required, can be used directly

Address Check

- Checking and correcting entered addresses
- Managed address pool with regular updates
- Encrypted data transfer via REST API

Data Duplicate

- Central configuration of the duplicate check in the system
- Tools for finding and removing duplicates
- Automated checks

Data Conversion

- Establishing connections between old and new objects
- Translation tables for old or foreign object numbers
- Efficient changeover to new systems through search aids

Data Board

- Overview and key figures from the master data area
- Number of active and inactive primary objects
- Specification of data quality per department

Data Archive

- Simple & efficient archiving of unused data records
- Automated archiving process
- Freely selectable parameters

Nagarro Data Care

- Supports intelligent master data management
- When switching to SAP S/4HANA, you have the rare opportunity to clean up your master data
- Optimized for SAP S/4HANA
- Inexpensive alternative compared to other MDM solutions
- Increased transparency in the data maintenance process

Benefits & advantages

over **90%**
User acceptance

up to **87%**
Time saving

up to **58%**
Cost reduction

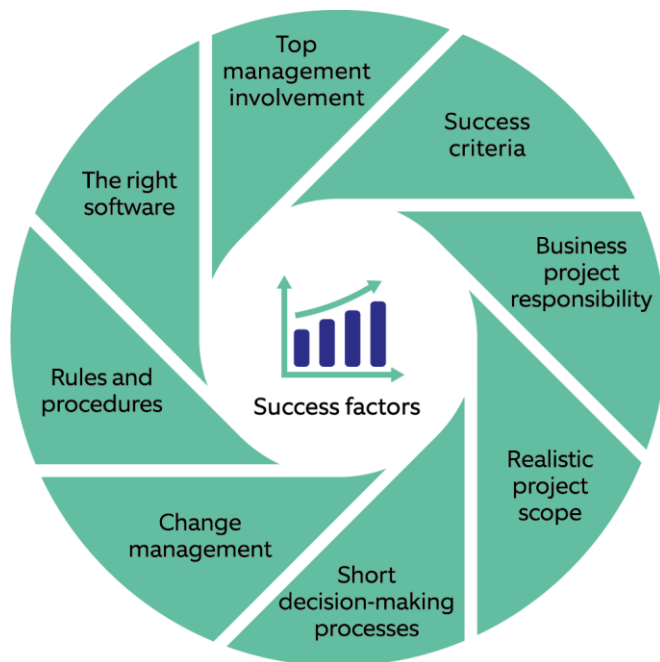

By using Nagarro Data Care, you realize the requirements of a modern digital master data management system:

- **Increase in master data quality** through structured and transparent data maintenance and permanent data checks
- **Time reduction** of up to 87 percent for master data creation by using the NDC Workflow APP
- **Very good user acceptance** of over 90 percent thanks to comprehensible and user-friendly applications
- **Avoid expensive individual program developments** by using NDC as quality-tested and field-proven standard software
- **Risk minimization** by improving data quality and stabilizing business processes
- **Cost reduction** of up to 58 percent in master data management thanks to more efficient workflows and process automation
- **Fast implementation** thanks to full integration in the SAP system, structured customizing and supplied templates
- **Solution that can be used in a validated environment** to meet even the highest requirements.

Manage master data successfully

Companies benefit from high-quality master data during IT projects such as the switch to SAP S/4HANA. The transition offers an ideal opportunity to clean up company data or introduce new MDM processes. To ensure high data quality in the long term, master data and maintenance processes should be continuously checked and optimized even after the transition.

With Nagarro Data Care, Nagarro not only offers an ideal solution for this, but also comprehensive consulting services. We support you on the path from strategy and planning to the implementation of your master data project. Thanks to numerous master data projects, we know the success factors, challenges and stumbling blocks and will be happy to advise you.

Your master data in good hands

Thinking breakthroughs

We will be happy to help you!
