Supply Chain Management

Start your journey with us implementing digital supply chain.

Rely on your transportation with SAP TM

SAP TM (Transportation Management) is a comprehensive transportation management solution developed by SAP, designed to help organizations manage all aspects of their transportation processes.

Nagarro is supporting you in implementation of SAP TM within SAP S/4HANA transformation as an own project.

Trust your warehouse with SAP EWM

SAP EWM (Extended Warehouse Management) is SAP's advanced solution for managing warehouse operations.

Nagarro is supporting you in implementation of SAP EWM within SAP S/4HANA transformation or for SAP EWM implementation in a simple manual warehouse to a complex automated warehouse.

Seemless Trade with SAP GTS

SAP GTS (Global Trade Services) is a specialized SAP solution designed to help companies manage and automate international trade processes, including compliance, customs, and risk management.

Nagarro is supporting you in implementation of SAP GTS within SAP S/4HANA transformation as an own project.

Are you ready to explore it?

Supply Chain Management is not just a support function – it's a strategic advantage.

Cost Savings

Through optimized planning and coordination of the supply chain, companies can reduce inventory, transportation, and storage costs. This saves money and increases competitiveness.

Improved Customer Satisfaction

A well-functioning SCM ensures that products arrive on time and in the desired quality. Satisfied customers are more loyal and are more likely to recommend the company.

Flexibility and Responsiveness

With an efficient SCM system, a company can respond more quickly to changes in the market, raw material prices, or demand fluctuations. This boosts competitiveness.

Risk Management

Transparent and well-coordinated supply chains allow risks such as delivery delays, bottlenecks, or quality problems to be identified and minimized at an early stage.

Innovation and Competitive Advantage

A modern SCM enables companies to bring new products to market faster and implement innovative business models.

Supply Chain Management is the backbone of a successful company because it helps reduce costs, increase customer satisfaction, and respond flexibly to changes. It ensures everything runs smoothly – from raw material to end customer.
