

Better Together

Identify and protect your
at-risk data with our Delphix
Masking Accelerator

Why use our Microservice?

We link Collibra with the power of Delphix, providing you with an efficient and automated end-to-end masking process; reducing delays and allowing you to mask accurately.

Minimise risk

Reduce risks
related to policy
compliance
and PII data

Reduce time-to-value

Automate implementing
masking rules accelerating
your data protection and
compliance program

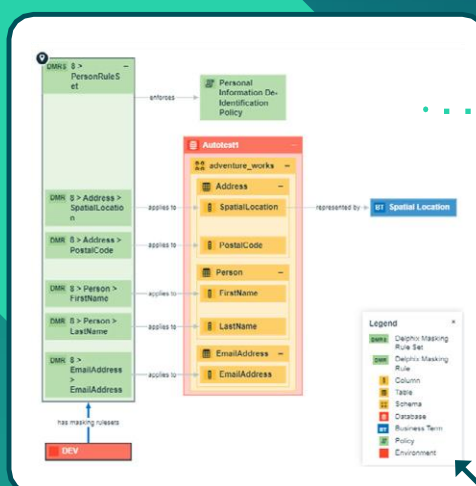

Improve focus

Allows your business to focus on
governance and the Delphix team to
focus on Masking Algorithms

Improve observability and validation

The business, CISO and DPO can see via a dashboard data
is safely masked and highlights any
failures, allowing them to manage that risk immediately

up to
25x faster

Secured/
masked non-prod
test data

How it works

- Exposes Delphix masking capabilities to Collibra Business Users for better visibility of protected and at-risk data.
- Centralises masking catalog and collaboration process workflows in a single pane of glass.
- Minimises time to implement masking rules, accelerating your Governance program.
- Delphix gets visibility of similar Data across the enterprise so it can onboard priority data and get it masked. And builds that adoption roadmap for you.
- Automates Sync between Masking Rules engine and Data Governance platform.
- Data Steward 'Self Service' data protection takes the responsibility away from IT and enables the data owners to protect their data.
- Defines the masking method once, and lets Collibra show you where else you can reuse that Masking rule.
