## Success story

Ensuring business continuity by providing application enhancement and support

A North American organization wanted to upgrade its systems from M3 v13.3 (on-prem) to M3 CloudSuite to support and enable new functionalities. Nagarro's solution ensured functional and technical support for existing Infor M3 v13.3 on-premises system, integration with internal and external applications and identification and creation of custom APIs.

The implementation benefitted the client in the following ways:

Event-based automation for **80%** of invoicing workflows

**50%** reduction in the time taken to create items, customers, suppliers, and invoices in the system

**20%** decrease in the average resolution time

**30%** reduction in the number of support tickets

**100%** accuracy in adding mass addresses for vendors and customers

Empower your business with simplified ERP solutions!
