

Test Automation Engineer

Established in 1996, Nagarro began as a dream of a few friends who wanted to create a company with a difference – a company that focused on “strategic differentiation via technology” initiatives rather than routine IT operations. Today we are more than 5000 experts across 16 countries. Together we form the global services division of Munich-based Allgeier SE.

At Nagarro, you can look forward to a work culture that is dynamic and non-hierarchical. You will be given opportunities to add value to challenging and complex assignments, while collaborating with world class technologists. The versatile environment here helps foster fresh perspectives and enables you to deliver high quality code. There will be ample opportunities provided for skill upgradation to accelerate your professional and personal development.

What makes you a good fit for this role

- › Solid knowledge of the test automation tools Squish and Selenium
- › Experience in testing of both fat (Java Swing based) and thin client applications
- › Experience in API testing
- › Knowledge of Java and JS programming languages and frameworks
- › Proficient in automation testing using Selenium and C# or similar
- › Analytical, proactive and out of the box thinking mind set
- › Passionate about delivering and executing high quality solutions
- › High level of commitment to client satisfaction and agility
- › Collaborate with others and build positive working relationships
- › Possess a strong work ethic
- › Excellent written and verbal communication skills
- › ISTQB Foundation Level certification (if certification is not existing but know how matches the requirements, we committed to catch up with the certification within 6-12 months)
- › Creating, updating and maintaining comprehensive manual test scenarios and test cases for functional and non-functional requirements
- › Organizing test case walkthroughs and ensuring test cases/scripts reviewed and approved by relevant stakeholders
- › Designing and developing a framework for test automation following the project's design and coding guidelines
- › Creating, updating and maintaining comprehensive scripts for test automation for functional and non-functional requirements
- › Executing test cases and preparing test logs
- › Logging defects and tracking them proactively and following them through to closure via bug tracking tools
- › Troubleshooting issues reported by the client, provide prompt and accurate responses to queries and concerns
- › Aiding in the release and deployment activities by verifying the build and release kit

What are your responsibilities

- › Understanding the project's functional and non-functional requirements. Review requirements and work very closely with team to provide inputs for requirement improvements, where possible
- › Identifying the scope of testing and availability of test data and environment
- › Providing test estimates and feedback to the QA Lead and Project Manager for project scheduling purposes

Nagarro drives technology-led business breakthroughs for industry leaders and challengers. When our clients want to move fast and make things, they turn to us. Today, we are more than 5,000 experts across 20 countries. Together we form Nagarro, the global services division of Munich-based Allgeier SE.
