Test Automation Engineer

I am the goalkeeper. My teammates trust I will not let bugs score. I have the vision & the structure. Always up to date about the most modern technologies and frameworks, through teamwork and active pairing, my automated script worked as I planned. Just in time, go - live will be flawless, because a well done job, is a quality job.

My daily business

- Closely work with product managers, developers, and support teams from initial requirements through deployment in a scrum delivery model.
- Analyze and evaluate business requirements.
- Design, develop and execute test cases (manual).
- Design and implement automated test suite that are fast, robust, and maintainable.
- Plan, coordinate and drive root cause and corrective actions for bugs/defects identified.

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

* Based on eligibility

My portfolio

- Hands on experience in developing automation scripts using open source tools like selenium or webdriverio with Java
- Experience with BDD tools like Cucumber, Mocha, Jasmine
- Fluent in English
- Communicate in a clear and concise manner the technical and business strategies in order to achieve the project goal and beyond
- Creative thinker who takes initiative
- Positive and friendly attitude always willing to help out
- Always ready for new challenges with confidence and passion
- Multitasking without losing sight of final goal
