Sr Java Developer

Two large screens and a laptop. A flipchart with all my thoughts: Planning, analysis, design and programming - from the design via architecture to the implementation of a software solution. Bringing the whole experience closer to the customer. Everything is in my hands because I am really good at it.

My daily business

- Understand business requirements, constraints and current situation
- Crafting of solution approach and implementation of software with my team
- Development of high performing data streams and APIs to guarantee fast and accurate deliverables
- Ensure software development quality in the team

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

* Based on eligibility

My portfolio

- Communicate in a clear and concise manner the technical and business strategies in order to achieve the project goal and beyond
- Background and extensive experience in development (Backend)
- Creative thinker who takes initiative
- Positive and friendly attitude always willing to help out
- Always ready for new challenges with confidence and passion
- Multitasking without losing sight of final goal
- High quality, logical and methodical coding skills
- Fluent in English
- Proficiency in Java 8, Microservices, React, RESTful, AWS cloud experience, MySQL

Questions, comments, your CV: mx.recruitment@nagarro.com

Sr Full Stack .NET Developer

Everything is set, in the new normal, my connection, VPN & robust equipment are synchronized. I am a creator. The passion for what I do brings a whole new experience to the end customer. It is all in my hands, I am really good at what I do.

Writing production code may be stressful, deadline is approaching, but like a perfect machine, my buddies and I are ready. A sip to my mug, no debugging can derail my day. I enter the state of flow and feel super productive. My head is in a different frequency, sense of time gets lost when I am crafting something.

My daily business

- Contribute to agile team goals by collaborating with other functions in the team
- Develop commented, well-engineered and tested production grade code based on the best practices and outlined business logic
- Crafting of solution approach and implementation of software with my teammates
- Development of high performing data streams and APIs to guarantee fast and accurate deliverables
- Ensure software development quality in the team

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

* Based on eligibility

My portfolio

- Proficiency in C#, webservices, REST, and other web technologies such as HTML, JavaScript, jQuery
- Fluent in English
- Communicate in a clear and concise manner the technical and business strategies in order to achieve the project goal and beyond
- Creative thinker who takes initiative
- Positive and friendly attitude always willing to help out
- Always open to new challenges with confidence and passion

Test Automation Engineer

I am the goalkeeper. My teammates trust I will not let bugs score. I have the vision & the structure. Always up to date about the most modern technologies and frameworks, through teamwork and active pairing, my automated script worked as I planned. Just in time, go - live will be flawless, because a well done job, is a quality job.

My daily business

- Closely work with product managers, developers, and support teams from initial requirements through deployment in a scrum delivery model.
- Analyze and evaluate business requirements.
- Design, develop and execute test cases (manual).
- Design and implement automated test suite that are fast, robust, and maintainable.
- Plan, coordinate and drive root cause and corrective actions for bugs/defects identified.

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

* Based on eligibility

My portfolio

- Hands on experience in developing automation scripts using open source tools like selenium or webdriverio with Java
- Experience with BDD tools like Cucumber, Mocha, Jasmine
- Fluent in English
- Communicate in a clear and concise manner the technical and business strategies in order to achieve the project goal and beyond
- Creative thinker who takes initiative
- Positive and friendly attitude always willing to help out
- Always ready for new challenges with confidence and passion
- Multitasking without losing sight of final goal

Java Software Architect

Communication, voting, Kanban boards, configurations – all this is part of my everyday life. I act as a link between development and infrastructure. Set up servers, build automated builds, improve time-to-market, coach teams and support them as an expert in the software lifecycle - and thus look at the IT project end to end. My passion for software and quality is what drives me. My goal: to create a better product in a more humane world of work.

My daily business

- Design and implementation of networks.
- Create technical specifications, architecture diagrams, network diagrams, data models, object diagrams, process flows and application development artifacts
- Microservices caching patterns
- Analyzing/tuning microservices performance
- Research new technologies and create conceptual models or solutions and present them to high-level audience across business, application and technology domains

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

- * Based on eligibility

My portfolio

- Expert in Cloud-Native Development, proficient in JDK 11, Spring Boot 2.x, Spring Cloud, Spring Batch and Integration using Microservice architecture
- Well versed with OOPS design concepts and good grasp of architectural patterns
- Hands-on experience with unit testing/ integration testing tools like Mockito, RestAssured, Cucumber.
- Working experience in building Images and Containerization using Docker, Docker Engine using an orchestration system like Kubernetes
- Experience building and deploying projects using CI/CD tools such as Jenkins
- Familiarity with event driven architecture patterns
- Knowledge of modern microservices security practices like OAuth2

Lead Software Engineer (.NET)

Risk-taking is encouraged here, innovation a must, and we reward great results. Collaboration and support are woven into the fabric of everything we do; from 24-hour Hackathon groups to sprint reviews and scrum teams, you'll be immersed in an environment that nurtures individualism, creative problem-solving, and intellect.

My daily business

- In this role you'll identify and manage technical risks and opportunities, taking responsibility for the quality of technical deliverables
- Lead a group of talented developers to create best in class vehicle ownership experience products.
- Motivate and cultivate empowered Engineering teams. Work across multiple scrum teams ensuring quality engineering standards.
- Build software applications across multiple platforms in response to the needs of stakeholders.

My future benefits

- Global mobility
- An opportunity to learn from new technologies with specialized training and certifications
- Competitive compensation
- Active participation in shaping the company
- Comprehensive onboarding and a personal job coach
- Remote work location available*

- * Based on eligibility

My portfolio

- Background and extensive experience in development (Backend)
- Strong foundational knowledge in the Microsoft .NET development stack. Working with the architecture team to design, develop and evolve solutions.
- Experience using .NET Framework 3.5+, .NET Core 2.0+ and VS 2017 +
- Knowledge over distributed applications, micro services and its underlying design patterns.
- Multitasking without losing sight of final goal
- High quality, logical and methodical coding skills
- Experience designing implementing microservices at scale with containers
