And more..

Full spectrum of RPA & Intelligent automation services

We have excellent track record of delivering impactful RPA solutions

Agentic AI-driven invoice monitoring and proactive approval issue resolution

For a Telecom provider, implemented an UiPath based Agentic AI solution that continuously monitored invoice data from Oracle EBS and tracker files to detect delays, missing info, incorrect assignments, & approval bottlenecks. Eliminated manual monitoring, prevented SLA breaches, enhanced approval accuracy, invoice processing, & significantly improved operational efficiency.

Automated vendor quote extraction process and delivered \$500K savings

For a global energy utility company, Nagarro implemented a UiPath Document Understanding-based solution to extract data from semi-structured vendor documents and auto-ingest it into internal applications. The automation eliminated manual effort, enabled rapid onboarding of new vendors, and delivered approximately USD 500K in annual savings.

Reduced manual effort and improved efficiency

For a global financial services provider, Nagarro leveraged Microsoft Power Automate to design and deploy end-to-end automated workflows which automated secure downloading of agency statements, applied compliant encryption, and enabled automated email distribution. This reduced daily manual effort 6–8 hours to 30 minutes and improved operational efficiency.
